

# MGC3030/3130 GestIC<sup>®</sup> Library Interface Description User's Guide

#### Note the following details of the code protection feature on Microchip devices:

- Microchip products meet the specification contained in their particular Microchip Data Sheet.
- Microchip believes that its family of products is one of the most secure families of its kind on the market today, when used in the intended manner and under normal conditions.
- There are dishonest and possibly illegal methods used to breach the code protection feature. All of these methods, to our knowledge, require using the Microchip products in a manner outside the operating specifications contained in Microchip's Data Sheets. Most likely, the person doing so is engaged in theft of intellectual property.
- Microchip is willing to work with the customer who is concerned about the integrity of their code.
- Neither Microchip nor any other semiconductor manufacturer can guarantee the security of their code. Code protection does not
  mean that we are guaranteeing the product as "unbreakable."

Code protection is constantly evolving. We at Microchip are committed to continuously improving the code protection features of our products. Attempts to break Microchip's code protection feature may be a violation of the Digital Millennium Copyright Act. If such acts allow unauthorized access to your software or other copyrighted work, you may have a right to sue for relief under that Act.

Information contained in this publication regarding device applications and the like is provided only for your convenience and may be superseded by updates. It is your responsibility to ensure that your application meets with your specifications. MICROCHIP MAKES NO REPRESENTATIONS OR WARRANTIES OF ANY KIND WHETHER EXPRESS OR IMPLIED, WRITTEN OR ORAL, STATUTORY OR OTHERWISE, RELATED TO THE INFORMATION. INCLUDING BUT NOT LIMITED TO ITS CONDITION, QUALITY, PERFORMANCE, MERCHANTABILITY OR FITNESS FOR PURPOSE. Microchip disclaims all liability arising from this information and its use. Use of Microchip devices in life support and/or safety applications is entirely at the buyer's risk, and the buyer agrees to defend, indemnify and hold harmless Microchip from any and all damages, claims, suits, or expenses resulting from such use. No licenses are conveyed, implicitly or otherwise, under any Microchip intellectual property rights.

#### **Trademarks**

The Microchip name and logo, the Microchip logo, dsPIC, FlashFlex, flexPWR, JukeBlox, KEELoQ, KEELoQ logo, Kleer, LANCheck, MediaLB, MOST, MOST logo, MPLAB, OptoLyzer, PIC, PICSTART, PIC<sup>32</sup> logo, RightTouch, SpyNIC, SST, SST Logo, SuperFlash and UNI/O are registered trademarks of Microchip Technology Incorporated in the U.S.A. and other countries.

The Embedded Control Solutions Company and mTouch are registered trademarks of Microchip Technology Incorporated in the U.S.A.

Analog-for-the-Digital Age, BodyCom, chipKIT, chipKIT logo, CodeGuard, dsPICDEM, dsPICDEM.net, ECAN, In-Circuit Serial Programming, ICSP, Inter-Chip Connectivity, KleerNet, KleerNet logo, MiWi, MPASM, MPF, MPLAB Certified logo, MPLIB, MPLINK, MultiTRAK, NetDetach, Omniscient Code Generation, PICDEM, PICDEM.net, PICkit, PICtail, RightTouch logo, REAL ICE, SQI, Serial Quad I/O, Total Endurance, TSHARC, USBCheck, VariSense, ViewSpan, WiperLock, Wireless DNA, and ZENA are trademarks of Microchip Technology Incorporated in the U.S.A. and other countries.

 $\ensuremath{\mathsf{SQTP}}$  is a service mark of Microchip Technology Incorporated in the U.S.A.

Silicon Storage Technology is a registered trademark of Microchip Technology Inc. in other countries.

GestIC is a registered trademarks of Microchip Technology Germany II GmbH & Co. KG, a subsidiary of Microchip Technology Inc., in other countries.

All other trademarks mentioned herein are property of their respective companies.

# QUALITY MANAGEMENT SYSTEM CERTIFIED BY DNV = ISO/TS 16949=

Microchip received ISO/TS-16949:2009 certification for its worldwide headquarters, design and wafer fabrication facilities in Chandler and Tempe, Arizona; Gresham, Oregon and design centers in California and India. The Company's quality system processes and procedures are for its PIC® MCUs and dsPIC® DSCs, KEELOQ® code hopping devices, Serial EEPROMs, microperipherals, nonvolatile memory and analog products. In addition, Microchip's quality system for the design and manufacture of development systems is ISO 9001:2000 certified.

# MGC3030/3130 GestIC® LIBRARY INTERFACE DESCRIPTION

#### **Preface**

#### **NOTICE TO CUSTOMERS**

All documentation becomes dated, and this manual is no exception. Microchip tools and documentation are constantly evolving to meet customer needs, so some actual dialogs and/or tool descriptions may differ from those in this document. Please refer to our web site (www.microchip.com) to obtain the latest documentation available.

Documents are identified with a "DS" number. This number is located on the bottom of each page, in front of the page number. The numbering convention for the DS number is "DSXXXXXA", where "XXXXXX" is the document number and "A" is the revision level of the document.

For the most up-to-date information on development tools, see the MPLAB<sup>®</sup> IDE on-line help. Select the Help menu, and then Topics to open a list of available online help files.

#### INTRODUCTION

This chapter contains general information that will be useful to know before using the MGC3030/3130 GestlC<sup>®</sup> Library Interface. Items discussed in this chapter include:

- Document Layout
- · Conventions Used in this Guide
- · Warranty Registration
- · Recommended Reading
- · The Microchip Web Site
- Development Systems Customer Change Notification Service
- Customer Support
- · Document Revision History

#### **DOCUMENT LAYOUT**

This document describes the MGC3030/3130 GestIC Library and is organized as follows:

- Chapter 1. Introduction
- Chapter 2. MGC3030/3130 Host Interface
- Chapter 3. GestIC Library Message Interface
- Chapter 4. GestIC Library Message Reference
- Chapter 5. Messages for GestIC Library Update

#### **CONVENTIONS USED IN THIS GUIDE**

This manual uses the following documentation conventions:

#### **DOCUMENT CONVENTIONS**

Description	Represents	Examples					
Arial font:							
Italic characters	Referenced books	MPLAB IDE User's Guide					
	Emphasized text	is the only compiler					
Initial caps	A window	the Output window					
	A dialog	the Settings dialog					
	A menu selection	select Enable Programmer					
Quotes	A field name in a window or dialog	"Save project before build"					
Underlined, italic text with right angle bracket	A menu path	File>Save					
Bold characters	A dialog button	Click <b>OK</b>					
	A tab	Click the <b>Power</b> tab					
N'Rnnnn	A number in verilog format, where N is the total number of digits, R is the radix and n is a digit.	4'b0010, 2'hF1					
Text in angle brackets < >	A key on the keyboard	Press <enter>, <f1></f1></enter>					
Courier New font:							
Plain Courier New	Sample source code	#define START					
	Filenames	autoexec.bat					
	File paths	c:\mcc18\h					
	Keywords	_asm, _endasm, static					
	Command-line options	-Opa+, -Opa-					
	Bit values	0, 1					
	Constants	0xff, 'A'					
Italic Courier New	A variable argument	file.o, where file can be any valid filename					
Square brackets [ ]	Optional arguments	mcc18 [options] file [options]					
Curly brackets and pipe character: {   }	Choice of mutually exclusive arguments; an OR selection	errorlevel {0 1}					
Ellipses	Replaces repeated text	<pre>var_name [, var_name]</pre>					
	Represents code supplied by user	<pre>void main (void) { }</pre>					

#### WARRANTY REGISTRATION

Please complete the enclosed Warranty Registration Card and mail it promptly. Sending in the Warranty Registration Card entitles users to receive new product updates. Interim software releases are available at the Microchip web site.

#### RECOMMENDED READING

This user's guide describes how to use MGC3030/3130 GestIC Library Interface. Other useful documents are listed below. The following Microchip documents are available and recommended as supplemental reference resources.

- "MGC3030/3130 3D Gesture Controller Data Sheet" (DS40001667) Consult this
  document for information regarding the MGC3030/3130 3D Tracking and Gesture
  Controller.
- "Aurea Graphical User Interface User's Guide" (DS40001681) Describes how to use the MGC3X30 Aurea Graphical User Interface.
- "GestIC® Design Guide" (DS40001716) This document describes the GestIC system characteristic parameters and the design process. It enables the user to generate a good electrode design and to parameterize the full GestIC system.

**Note:** The "MGC3030/3130 GestIC® Library Interface Description User's Guide" applies to the MGC3030 and MGC3130 parts. Throughout this document the term MGC3X30 will be representative for these two parts.

#### THE MICROCHIP WEB SITE

Microchip provides online support via our web site at www.microchip.com. This web site is used as a means to make files and information easily available to customers. Information about GestIC technology and MGC3X30 can be directly accessed via <a href="http://www.microchip.com/gestic">http://www.microchip.com/gestic</a>.

#### **DEVELOPMENT SYSTEMS CUSTOMER CHANGE NOTIFICATION SERVICE**

Microchip's customer notification service helps keep customers current on Microchip products. Subscribers will receive e-mail notification whenever there are changes, updates, revisions or errata related to a specified product family or development tool of interest.

To register, access the Microchip web site at www.microchip.com, click on Customer Change Notification and follow the registration instructions.

The Development Systems product group categories are:

- Compilers The latest information on Microchip C compilers, assemblers, linkers and other language tools. These include all MPLAB<sup>®</sup> C compilers; all MPLAB assemblers (including MPASM™ assembler); all MPLAB linkers (including MPLINK™ object linker); and all MPLAB librarians (including MPLIB™ object librarian).
- **Emulators** The latest information on Microchip in-circuit emulators. This includes the MPLAB<sup>®</sup> REAL ICE™ and MPLAB ICE 2000 in-circuit emulators.
- In-Circuit Debuggers The latest information on the Microchip in-circuit debuggers. This includes MPLAB ICD 3 in-circuit debuggers and PICkit™ 3 debug express.
- MPLAB IDE The latest information on Microchip MPLAB IDE, the Windows
   Integrated Development Environment for development systems tools. This list is
   focused on the MPLAB IDE, MPLAB IDE Project Manager, MPLAB Editor and
   MPLAB SIM simulator, as well as general editing and debugging features.
- Programmers The latest information on Microchip programmers. These include production programmers such as MPLAB REAL ICE in-circuit emulator, MPLAB ICD 3 in-circuit debugger and MPLAB PM3 device programmers. Also included are nonproduction development programmers such as PICSTART<sup>®</sup> Plus and PICkit 2 and 3.

#### **CUSTOMER SUPPORT**

Users of Microchip products can receive assistance through several channels:

- Distributor or Representative
- · Local Sales Office
- Field Application Engineer (FAE)
- · Technical Support

Customers should contact their distributor, representative or field application engineer (FAE) for support. Local sales offices are also available to help customers.

Technical support is available through the web site at:

http://www.microchip.com/support.

#### **DOCUMENT REVISION HISTORY**

#### Revision A (August, 2013)

Initial release of the document.

#### **Revision B (November, 2013)**

Updated Chapters 1, 2, 3 and 4; Added Chapter 5; Updated content for GestlC Library V1.0 and later.

#### Revision C (May, 2014)

Updated Section 3.5.2 (Payload Extraction), Section 4.2 (Request\_Message), Section 4.4 (Set\_Runtime\_Parameter) and Section 4.5 (Sensor\_Data\_Output); Updated Tables 3-7, 3-12, 3-13, 3-14, 5.2, 5-4 and 5-6; Added Appendix A (I<sup>2</sup>C™ Command Examples).

#### Revision D (January, 2015)

Changed document title; Added note and updated titles in the Recommended Reading section; Updated Appendix B; Other minor corrections.

# MGC3030/3130 GestIC® LIBRARY INTERFACE DESCRIPTION

### **Chapter 1. Introduction**

#### 1.1 PURPOSE OF THIS DOCUMENT

This document is the interface description of the MGC3X30's GestIC Library. It outlines the function of the Library's I<sup>2</sup>C™ message interface, and contains the complete message reference to control and operate the MGC3X30 system.

The main sections covered are:

- · Description of the message interface and data protocol
- · Message reference of the GestIC Library

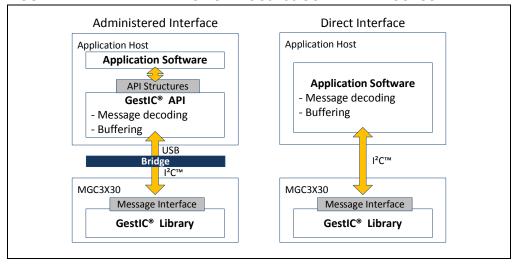

The parameterization of the Colibri Suite is not covered in this document. That is only possible via Aurea PC software. Please refer to "Aurea Graphical User Interface" (DS40001681).

#### 1.2 MGC3X30 SOFTWARE ARCHITECTURE

A MGC3X30 system can be accessed at two software levels:

- by direct I<sup>2</sup>C access via message interface of GestIC Library (direct interface)
- by GestIC API as an abstraction layer of the messages (administered interface) Examples for the two principal options are shown in Figure 1-1.

FIGURE 1-1: EXAMPLES FOR MGC3X30 SOFTWARE ACCESS

The direct interface is the simplest way to access MGC3X30, but it requires the user to receive and decode all I<sup>2</sup>C messages and validate received data. Direct access is recommended if a reduced set of sensor data are used by the application (e.g., gestures only, position only). The administered interface via GestIC API provides decoded and validated sensor data, which can be immediately used in the application. Typically, GestIC API runs in PC applications or OS drivers, which provide data to the application software.

The following sections give a brief description of the building blocks of the two interface modes.

#### 1.3 GestIC® LIBRARY

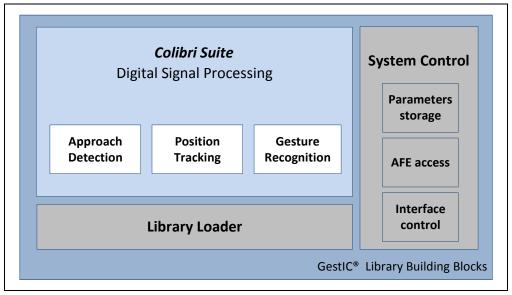

The GestIC Library is embedded firmware stored on the MGC3X30's internal Flash memory. It contains:

- the Colibri Suite with the digital signal processing algorithms for GestIC features (i.e., GestIC core features Approach Detection, Position Tracking and Gesture Recognition)
- the System Control block providing full control of host interfaces, parameter storage and AFE access
- · the Library Loader for updates of GestIC Library

The main building blocks are shown in Figure 1-2.

The GestIC Library incorporates a message-based interface that allows the configuration of the chip and the streaming of sensor data to the host application.

FIGURE 1-2: BUILDING BLOCKS OF GestIC® LIBRARY

#### 1.4 BRIDGE

An additional hardware bridge is needed if the application host does not support a native I<sup>2</sup>C interface. The bridge converts the I<sup>2</sup>C hardware protocol to USB/UART.

If a bridge hardware is incorporated, the application host may need an additional device driver to register the interface and provide MGC3X30 data within the operating system.

Examples are:

- Windows<sup>®</sup> CDC driver to send MGC3X30 data to a virtual COM port. In this case, the driver is not aware of the MGC3X30 data format.
- HID driver to use the MGC3X30 data directly as USB HID classes within the operating system. Such driver must decode MGC3X30 messages and, thus, the GestIC API reference code is recommended to be part of it.

#### 1.5 GestIC API

As an abstraction layer for MGC3X30 messages, Microchip developed the GestIC API to provide a simplified user interface which can be easily integrated into the customer's application.

GestIC API comes along with a C reference code which includes message buffer, decoder and event handler to make the interface independent from the low-level protocol and its timing constraints.

#### 1.6 APPLICATION SOFTWARE

The sensor output is used in a user's application which integrates context-driven actions based on the user's hand movements.

Typically, the application software provides a graphical user interface (GUI) to visualize the MGC3X30 control options, like Aurea, which is delivered within the MGC3X30 evaluation and development kits.

# MGC3030/3130 GestIC® LIBRARY INTERFACE DESCRIPTION

## Chapter 2. MGC3030/3130 Host Interface

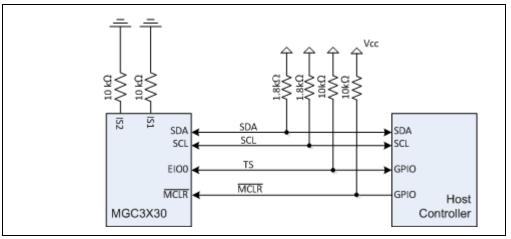

#### 2.1 MGC3X30 HARDWARE INTERFACE

Communication with the MGC3X30 is accomplished via a two-wire I<sup>2</sup>C compatible serial port, which allows the user to read the sensor data and to send control messages to the chip. It communicates via the serial interface with a master controller, which operates at speeds up to 400 kHz. One pin (IS2) is available for address selection and enables the user to connect up to two MGC3X30 devices on the same bus without address conflict.

**Note:** The MGC3X30 I<sup>2</sup>C<sup>™</sup> addresses are 0x42 and 0x43. They are given as device addresses without the R/W bit. Please compare to the "MGC3030/3130 3D Gesture Controller Data Sheet" (DS40001667).

In addition, MGC3X30 requires a dedicated transfer status line (TS), which features a data transfer status function. It is used by both I<sup>2</sup>C Master and Slave to control the data flow. I<sup>2</sup>C SCL, I<sup>2</sup>C SDA and TS lines require an open-drain connection on MGC3X30 and the connected host controller. To function properly, I<sup>2</sup>C SCL and I<sup>2</sup>C SDA need to be pulled up to Vcc with 1.8 k $\Omega$  resistors and the TS line needs to be pulled up to Vcc with a 10 k $\Omega$  resistor.

FIGURE 2-1: HARDWARE INTERFACE TO HOST CONTROLLER

In order to complete the control options for MGC3X30, it is recommended that the host controller controls the MGC3X30  $\overline{\text{MCLR}}$  line. In particular, the hardware reset is necessary for the update procedure of the GestIC Library.

#### 2.2 USAGE OF TRANSFER STATUS LINE (TS)

The transfer status line is used to check if I<sup>2</sup>C data are valid and if they can be sent from MGC3X30 to the host controller.

The MGC3X30 (I<sup>2</sup>C Slave) uses this line to inform the host controller (I<sup>2</sup>C Master) that there is data available which can be transferred. The host controller uses the TS line to indicate that data are being transferred and prevents MGC3X30 from updating its data buffer.

Table 2-1 shows how the TS line is used in the different states of communication.

MGC3X30 can update the I<sup>2</sup>C buffer only when TS is released by both chips, and a data transfer can only be started when MGC3X30 pulls TS low.

This procedure secures that:

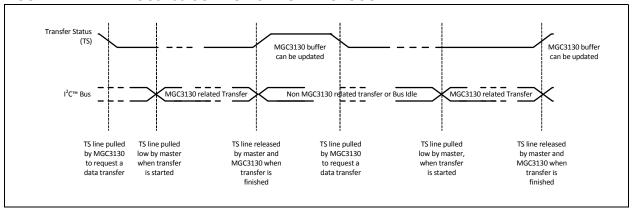

- · the host is always informed when new sensor data are available
- buffer updates in MGC3X30 are always completed before data are sent to the I<sup>2</sup>C

Figure 2-2 shows the complete communication protocol.

TABLE 2-1: USAGE OF TRANSFER STATUS LINE

IABLE 2-1.	USAGE OF TRANS	FER STATU	3 LINE
MGC3X30	Host Controller	TS Line	Status
Released (H)	Released (H)	High	Host finished reading data (Transfer end). No more data to be transferred to the host. MGC3X30 is allowed to update the data buffer.
Asserted (L)	Released (H)	Low	Data from MGC3X30 is available to be sent, but the host has not yet started reading. If the host is busy and did not start reading before the next data update (5 ms), the MGC3X30 will assert the TS line high while updating the data buffer.
Asserted (L)	Asserted (L)	Low	Host starts reading. MGC3X30 data buffer will not be updated until the end of transfer (host releases TS high).
Released (H)	Asserted (L)	Low	MGC3X30 is ready to update the data buffer, but the host is still reading the previous data. MGC3X30 is allowed to update the data only when the host releases the TS high.

#### FIGURE 2-2: MGC3X30 COMMUNICATION PROTOCOL

- Note 1: The Stop condition after an I<sup>2</sup>C<sup>™</sup> data transmission is generated by the host controller (I<sup>2</sup>C<sup>™</sup> Master) after the data transfer is completed. Thus, it is recommended to verify the amount of bytes to be read in the message header (Size field).
  - 2: Transfer Status is only needed for data transfer from MGC3X30 to the host controller. Writing to MGC3X30 does not require the additional TS signal.

#### 2.3 CODING EXAMPLE

In addition to the standard I<sup>2</sup>C interface, the communication between MGC3X30 and the host controller requires a proper handling of the Transfer Status. For an easier integration, the requirements are put into the code examples below.

#### **EXAMPLE 2-1: CODE IMPLEMENTATION IN HOST CONTROLLER**

```
I^2C^{TM} Read Function - requires TS:
I^2C^{TM} Master read loop:
    Read TS
    If TS == 0:
       Assert TS
       Send I^2C^{\text{TM}} start condition
        Send I^2C^{TM} device address + read indication
       Receive I^2C^{TM} payload (the GestIC<sup>®</sup> Library message)
       Send I^2C^{TM} stop condition
       Release TS
    Wait 200 µs (to assure that MGC3X30 released TS line, too)
I^2C^{TM} Write Function - does not require TS:
I^2C^{TM} Master write loop:
       Send I^2C^{TM} start condition
        Send I^2C^{\text{TM}} device address + write indication
        Send I^2C^{TM} payload (the GestIC<sup>®</sup> Library message)
        Send I^2C^{TM} stop condition
```

# MGC3030/3130 GestIC® LIBRARY INTERFACE DESCRIPTION

## Chapter 3. GestIC Library Message Interface

#### 3.1 MESSAGES OVERVIEW

GestIC Library messages are defined for providing sensor data to the host application and for controlling MGC3X30 and its embedded features. They are sent as the payload of the  $\rm I^2C$  packets.

TABLE 3-1: MESSAGES FOR SYSTEM CONTROL

ID	Name	Page
0x15	System_Status	29
0x06	Request_Message	31
0x83	Fw_Version_Info	32
0xA2	Set_Runtime_Parameter	33

#### TABLE 3-2: MESSAGE FOR SENSOR DATA OUTPUT

ID	Name	Page
0x91	Sensor_Data_Output	42

#### TABLE 3-3: MESSAGES FOR GestIC® LIBRARY UPDATE

ID	Name	Page
0x80	Fw_Update_Start	46
0x81	Fw_Update_Block	47
0x82	Fw_Update_Completed	49

#### 3.2 MESSAGE FORMAT

A message is the container to exchange data between GestIC Library and the application host. Each message has a length minimum of 4 bytes and a maximum of 255 bytes, and fits into the data packets of the communication interface (e.g., I<sup>2</sup>C). Each frame transports a single message (see Figure 3-1).

FIGURE 3-1: MGC3X30 MESSAGE EMBEDDED IN THE I<sup>2</sup>C<sup>™</sup> FRAME

START	Device Address	R/W	MGC3X30 Message	STOP
1 Bit	7 Bit	1 Bit	4255 Bytes	1 Bit

Messages consist always of a 4-byte header and a variable payload. The format is shown in Figure 3-2.

FIGURE 3-2: MGC3X30 MESSAGE FORMAT

4 055
4255 Bytes
2)100

#### 3.3 MESSAGE HEADER

The GestIC Library message header is fixed and has a length of 4 bytes. It contains four data fields shown in Figure 3-3 and explained in Table 3-4.

FIGURE 3-3: MGC3X30 MESSAGE HEADER

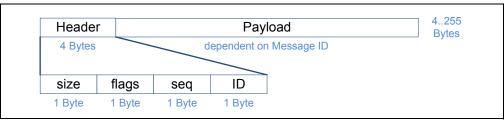

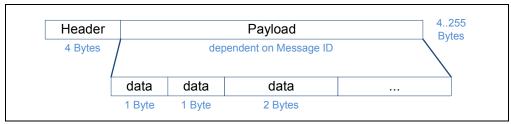

TABLE 3-4: DATA FIELDS OF MGC3X30 MESSAGE HEADER

Field	Size (in bytes)	Description
Msg. Size	1	Complete size of the message in bytes including the header.
Flags	1	Reserved for future use.
Seq.	1	Sequence number which is increased for each message sent out by MGC3X30. Range is 0255. The host controller can use that information to verify if the messages got lost during I <sup>2</sup> C™ transmission. MGC3X30 ignores the sequence number in the received messages.
ID	1	ID of the message. For each ID, the GestIC <sup>®</sup> Library holds a dedicated structure containing the message direction, its payload elements and possible reply actions.

#### 3.4 MESSAGE PAYLOAD

The message payload has a variable length and consists of one or more payload elements that contain the information to be exchanged. Depending on the content, these elements can be numerical values or dedicated numbers.

#### FIGURE 3-4: MGC3X30 MESSAGE PAYLOAD

**Note:** Payload elements are exchanged in little endian format. This means that the Lowest Significant Byte is written first.

Example: Element of 4 bytes: [Byte0]:[Byte1]:[Byte2]:[Byte3]

The structure and content of the payload elements is given in **Chapter 4. "GestIC Library Message Reference"**.

#### 3.5 MESSAGE CODING AND DECODING

GestIC Library messages can be read as a row of hexadecimal values. In order to decode them, the header and payload elements need to be extracted and mapped to the definition in the message reference (see **Chapter 4.** "**GestIC Library Message Reference**").

As an example message, ID 0x83, FW\_Version\_Info is decoded in the following section.

#### EXAMPLE 3-1: HEXADECIMAL REPRESENTATION OF MESSAGE 0x83

84 00 00 83 AA 63 80 E6 0C 64 15 20 31 2E 30 2E 30 3B 70 3A 48 69 6C 6C 73 74 61 72 56 30 31 3B 44 53 50 3A 49 44 39 30 30 72 31 38 34 39 3B 69 3A 42 3B 66 3A 32 32 35 30 30 3B 6E 4D 73 67 3B 74 3A 32 65 74 61 32 72 31 30 34 30 3A 31 30 34 39 3A 4D 4B 3B 74 3A 32 32 30 00 10 00 00 55 AA 90 65 20 20 80 0F FF 00 FF 00 FF 00 E1 EA 00 00

#### 3.5.1 Header Extraction

#### **EXAMPLE 3-2: MESSAGE HEADER**

84 00 00 83 AA 63 80 E6 0C 64 15 20 31 2E 30 2E 30 3B 70 3A 48 69 6C 6C 73 74 61 72 56 30 31 3B 44 53 50 3A 49 44 39 30 30 30 72 31 38 34 39 3B 69 3A 42 3B 66 3A 32 32 35 30 30 3B 6E 4D 73 67 3B 73 3A 42 65 74 61 32 72 31 30 34 30 3A 31 30 34 39 3A 4D 4F 3B 63 3A 4D 4B 49 3B 74 3A 32 30 31 33 2F 31 31 2F 30 38 20 31 33 3A 30 33 3A 30 00 10 00 00 55 AA 90 65 20 20 80 0F FF 00 FF 00 E1 EA 00 00

The message header contains the following information:

- Size: 0x84 Message including header is 132 bytes long
- Flags: 0x00 Flags are not set
- Seq.: 0x00 The message has been sent out with a sequence number of 0
- ID: 0x83 The message ID is 0x83, Fw\_Version\_Info

#### 3.5.2 Payload Extraction

#### **EXAMPLE 3-3:** MESSAGE PAYLOAD

84 00 00 83 AA 63 80 E6 0C 64 15 20 31 2E 30 2E 30 3B 70 3A 48 69 6C 6C 73 74 61 72 56 30 3B 66 4D 73 67 3B 67 3B 68 4D 74 3A 32 32 31 3B 68 4D 4B 49 3B 74 3A 32 3C 3D 3B 58 AA 90 65 20 20 80 0F FF 00 FF 00 E1 EA 00 00 00

According to Section 4.3 "Fw\_Version\_Info", Fw\_Version\_Info holds seven payload elements:

FwValid Status of GestIC Library (1 byte)
 HwRev HW revision information (2 bytes)
 ParameterStartAddr Start address of parameter (1 byte)
 LibraryLoaderVersion GestIC Library loader version (2 bytes)
 LibraryLoaderPlatform GestIC Library loader platform (1 byte)
 FwStartAddr Start address of GestIC Library(1 byte)

• FwVersion Version information of GestIC Library if valid (120

bytes)

The values can now be converted and mapped to the description of the payload elements:

**FwValid** = AA (170): A valid GestIC Library is available

**HwRev** = 63 80 (read as 0x63 0x80): HW revision is 99.128

ParameterStartAddr = 0xE6 (230x128=29440): Start address of parameter

is 29440

**LibraryLoaderVersion** = 0C 64 (read as 0x64 0x0C): Library Loader version

**is** 100.12

**LibraryLoaderPlatform** = 15 (read as 0x15): Library Loader Platform is 21

**FwStartAddr** = 0x20 (32x128=4096): Start address of GestIC

Library is 4096

FwVersion = 31 2E 30 2E 30 3B 70 3A 48 69 6C 6C 73 74 61 72 56 30 31 3B 44 53 50 3A 49 44 39 30 30 30 72 31 38 34 39 3B 69 3A 42 3B 66 3A 32 32 35 30 30 3B 6E 4D 73 67 3B 73 3A 42 65 74 61 32 72 31 30 34 30 3A 31 30 34 39 3A 4D 4F 3B 63 3A 4D 4B 49 3B 74 3A 32 30 31 33 2F 31 31 2F 30 38 20 31 33 3A 30 33 3A 30 00 10 00 00 55 AA 90 65 20 20 80 0F FF 00 FF 00 E1 EA 00 00

The version string is interpreted by ASCII characters. It is a semicolon-separated string, always starting with the version number itself, followed by different tags:

1.0.0;p:HillstarV01;DSP:ID9000r1849;i:B;f:22500;nMsg;s:Beta2r1040:1049:MO;c:MKI;t:2013/11/0813:03:0;...

#### 3.6 MESSAGE CONTROL FLOW AND CODING EXAMPLES

#### 3.6.1 Message Control Flow

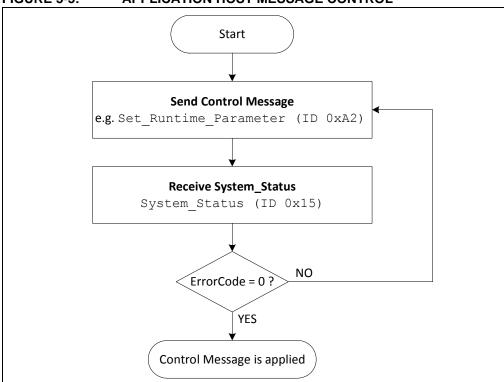

The control of MGC3X30 GestIC Library is done through the following messages:

- Set\_Runtime\_Parameter (ID 0xA2)
- Request Message (ID 0x06)

MGC3X30 acknowledges each control message by a  $System\_Status$  (ID 0x15) which contains the original message ID and a 2-byte error code. If the error code is '0', the message is applied correctly to MGC3X30.

The message control flow from the point of view of the application host is shown in Figure 3-5.

FIGURE 3-5: APPLICATION HOST MESSAGE CONTROL

**Note:** The Hillstar and Sabrewing I<sup>2</sup>C to USB bridge prefixes every I<sup>2</sup>C packet with <code>0xFEFF</code> before it is sent out via UART emulation on USB. That is done to allow a frame separation inside the data stream of the PC. For messages sent to MGC3X30 from a terminal program (e.g., Hterm), the prefix has to be added, as well.

#### 3.6.2 Read GestIC Library Version

After Power-on or Reset, MGC3X30 runs the Library Loader and sends out the message  $Fw_Version_Info_{0x83}$ . The application host can receive this message as a first communication check. After a time-out of 200 ms, the GestIC Library Processing mode is started automatically.

The application host can request the  $FW_Version_Info$  during runtime by using Request Message (0x06).

#### 3.6.2.1 EXAMPLE: REQUEST FW VERSION INFO

The following example shows how the Request\_Message (0x06) is used to request a FW Version Info (0x83) message.

TABLE 3-5: MESSAGE FROM HOST TO MGC3X30: REQUEST\_MESSAGE (0X06)

Raw Message	OC 00 00 06 83 00 00 00	00 00 00 00	
Payload Element	MessageID	Reserved	Parameter
Hex in little endian	83	00 00 00	00 00 00 00
Hex decoded	0x83	n.a.	n.a.
Description	FW_Version_Info	n.a.	n.a.

MGC3X30 replies with message FW\_Version\_Info (0x83) followed by System Status (0x15), containing the error code.

TABLE 3-6: MESSAGE FROM MGC3X30 TO HOST: FW VERSION INFO (0X83)

GestIC Library Version: 1.0.0
 Plattform: HillstarV01
 Colibri Suite Version: ID9000r1849

• Build Time: 2013/11/08 13:03:08

#### 3.6.3 Run-Time Control

A dedicated set of run-time control options is provided within the message  $Set_Runtime_Parameter~(0xA2)$ . It can be used to control the active feature set and sensor data output and, thus, it allows the build-up of a context-sensitive operation of MGC3X30. For a detailed message description, please refer to Section 4.4 "Set\_Runtime\_Parameter".

The following examples show how to set relevant runtime parameters.

#### 3.6.3.1 EXAMPLE: ENABLE APPROACH DETECTION

This example shows how to enable the Approach Detection mode by using the message Set Runtime Parameter (0xA2).

TABLE 3-7: MESSAGE FROM HOST TO MGC3X30: SET RUNTIME PARAMETER (0XA2)

Raw Message	10 00 00 A2 97 00 00 00 01 00 00 01 00 00 00					
Payload Element	RuntimeParameterID	Reserved	Argument0	Argument1

Hex decoded	0xA0	0x0000	0x000001E	Oxffffffff
Description	DataOutputEn- ableMask	n.a.	Enable bit 1bit 4; disable all other bits	Overwrite existing configuration

MGC3X30 replies with message System Status (0x15). Refer to Table 3-8.

#### 3.6.3.4 EXAMPLE: LOCK DATA OUTPUT

This example shows how to lock the sensor data output of Gesture Data, Touch Data, AirWheel Data and Position Data. Please refer to **Section 4.4.5.5** "**Data Output Lock Mask**".

TABLE 3-11: MESSAGE FROM HOST TO MGC3X30: SET\_RUNTIME\_PARAMETER (0XA2)

Raw Message	10 00 00 A2 A1 00 00 00 1E 00 00 00 FF FF FF FF					
Payload Element	RuntimeParameterID Reserved Argument0 Argument1					
Hex in little endian	A1 00	00 00	1E 00 00 00	FF FF FF FF		
Hex decoded	0x00A1	0x0000	0x000001E	0xFFFFFFFF		
Description	DataOutputLockMask	n.a.	Enable bit 1bit 4; disable all other bits	Overwrite existing configuration		

MGC3X30 replies with message System Status (0x15). Refer to Table 3-8.

# **GestIC Library Message Interface**

#### 3.6.4 Sensor Data Output

The GestIC Library processes sensor data with a default update rate of 5 ms. That means the I $^2$ C message buffer is regularly updated in that time interval. Whenever new data are available, MGC3X30 pulls the TS line to request the I $^2$ C master to transfer this data. Sensor data sent from MGC3X30 to the host are included in the message Sensor\_Data\_Output (0x91).

The content of the sensor data output can be configured via the message  $Set_Runtime_Parameter~(0xA2)$ .

#### 3.6.4.1 EXAMPLE: READ SENSOR DATA OUTPUT

In the following examples the sensor data output is configured according to Section 3.6.3.3 "Example: Enable Data Output" and Section 3.6.3.4 "Example: Lock Data Output".

TABLE 3-12: MESSAGE FROM MGC3X30 TO HOST: FLICK EAST TO WEST

# MGC3030/3130 GestIC® LIBRARY INTERFACE DESCRIPTION

## Chapter 4. GestIC Library Message Reference

#### 4.1 SYSTEM\_STATUS

System\_Status is used to acknowledge the reception of messages from the host. This message holds the error code and is used to confirm the transmission of the following messages:

- Request Message (0x06)
- Set Runtime Parameter (0xA2)
- Fw Update Start (0x80)
- Fw Update Block (0x81)
- Fw Update Completed (0x82)

Direction: MGC3X30 to Host

TABLE 4-1: MESSAGE OVERVIEW

	Header			Payload				
Msg. Size	Flags	Seq.	ID	MsgID	MaxCmdSize	ErrorCode	Reserved	Reserved
1 Byte	1 Byte	1 Byte	1 Byte	1 Byte	1 Byte	2 Bytes	4 Bytes	4 Bytes
0x10	n.a.	n.a.	0x15	see description below				

TABLE 4-2: PAYLOAD ELEMENTS

Element	Element Size (in bytes)	Desc	cription			
MsgID	1	Holds the Message ID which System_Status corresponds to  Structure: 1 byte  Range: (0x000xFF)				
MaxCmdSize	1	Holds the maximum I <sup>2</sup> C <sup>TM</sup> packet size Ge <b>Structure</b> : 1 byte <b>Range</b> : (00xFF)	stIC <sup>®</sup> Library accepts (including header)			
ErrorCode	2	Error code, returned for the previous message.  Structure: 16-bit word containing dedicated values (see list below)  Possible values:  These error codes are sent by the Library Loader, Library Loader Updater  0x0000 NoError OK  0x0001 UnknownCommand Message ID is unknown				
		These error codes are sent by the Library 0x0002 InvalidSessionId	Loader Session ID is invalid or does not match (0x0 is not allowed) (message FwUpdateStart, FwUpdateCompleted)			
		0x003 InvalidCrc	CRC is invalid thrown by commands: FwUpdateBlock, FwUpdate-Start,FwUpdateCompleted			
		0x0004 InvalidLength	Length is invalid (message FwUpdateBlock)			
		0x0005 InvalidAddress	Address is invalid (message FwUpdateBlock)			
		0x0006 InvalidFunction	Function-id is invalid (message FwUpdateStart, FwUpdateBlock, FwUpdateCompleted)			
		0x0008 ContentMismatch	The VerifyOnly function found a mismatch between content and Flash memory (message: FwUpdateBlock)			
		0x000B WrongParameterAddr	Parameter Start address, contained in the new Library FW to be loaded, does not match Library Loader assumption. The Library Update is therefore aborted. (message: FwUpdateStart)			
		These error codes are sent by the Library				
		0x0014 WrongParameterValue	The value of the Argument/Parameter of a RuntimeParameter command is out of the valid range (message: Request Message and Set_Runtime_Parameter)			
		0x0015 UnknownParameterID	The MessageID or RuntimeParameterID is unknown or out of the valid range (message: Request Message and Set_Runtime_Parameter)			
		0x001A WakeupHappend	A wake-up by Host was detected			
		These error codes are sent by the Library 0x0080 LoaderUpdateStarted	Loader Updater The Library Loader update started			
		0x0081 LoaderUpdateFinished	The Library Loader update finished			

# **GestIC Library Message Reference**

#### **TABLE 4-2: PAYLOAD ELEMENTS**

Element	Element Size (in bytes)	Description
Reserved	4	Reserved
Reserved	4	Reserved

#### 4.2 REQUEST\_MESSAGE

Request\_Message forces GestIC Library to reply to the message with the requested ID

Direction: Host to MGC3X30

#### TABLE 4-3: MESSAGE OVERVIEW

Header			Payload			
Msg. Size	Flags	Seq.	ID	MessageID	Reserved	Param.
1 Byte	1 Byte	1 Byte	1 Byte	1 Byte 3 Bytes 4 By		4 Bytes
0x0C	n.a.	n.a.	0x06	see description below		

#### TABLE 4-4: PAYLOAD ELEMENTS

Element	Element Size (in bytes)	Description
MessageID	1	Request the Message with ID MessageID from GestIC® Library.  GestIC® Library shall answer with the requested message or stay silent.  Structure: Single byte read as a hexadecimal value  Range: (0x000xFF)
Reserved	3	Reserved, write as '0'.
Param.	4	Optional, parameter can be used to specify the kind of return.  Example: Requesting message SetRuntimeParameter, param. specifies the RuntimeParameterId to read-back the parameter.  Structure: 32-bit word, containing dedicated values or bit fields.  Range: (0x000000000xFFFFFFFF)

- Note 1: The Request\_Message command can only be used with MessageID 0x83 and 0xA2.
  - 2: The TransFreqSelect runtime parameter is a write only parameter and could not be requested with message Request\_Message.
  - **3:** For the complete list of the Request\_Message command examples please refer to Table A-1.

#### 4.3 FW\_VERSION\_INFO

At start-up, MGC3X30 sends  $Fw_Version_Info$  message to the host interface to show that the chip is alive and ready for operation.  $Fw_Version_Info$  can also be requested using Request Message (0x06).

Note: The payload elements HWRev, ParameterStartAddr and

LibraryLoaderVersion are only valid after MGC3X30 start-up.

Direction: MGC3X30 to Host.

#### TABLE 4-5: MESSAGE OVERVIEW

Header			Payload						
Msg. Size	Flags	Seq.	ID	FwValid HwRev ParameterStartAddr LibraryLoaderVersion FwStartAddr FwVer			FwVersion		
1 Byte	1 Byte	1 Byte	1 Byte	1 Byte	2 Bytes	1 Byte	3 Bytes	1 Byte	120 Bytes
0x84	n.a.	n.a.	0x83	see description below					

#### TABLE 4-6: PAYLOAD ELEMENTS

Element	Element Size (in bytes)	Description		
FwValid	1	Status of GestIC® Library.  Structure: Single byte containing dedicated values (see list below)  Possible values:  0x00		
HwRev	2	Hardware revision information  Structure: Vector of 2 bytes interpreted as decimal values in format xx.xx  Range: (0x000xFF, 0x000xFF)		
ParameterStartAddr	1	Parameter start address as supported by the Image address = 128 * value of ParameterStartAddr Structure: 1 byte interpreted as hex value Range: (0x000xFF)		
LibraryLoaderVersion	3	GestIC <sup>®</sup> Library loader version information  Structure: Vector of 3 bytes interpreted as decimal values in format  xx.xx.xx  Range: (0x000xff, 0x000xff, 0x000xff)		
FwStartAddr	1	Start address of GestIC <sup>®</sup> Library as supported by the Bootloader, start address = 128 * value of FwStartAddr  Structure: 1 byte interpreted as hex value  Range: (0x000xFF)		
FwVersion	120	Version information of GestIC <sup>®</sup> Library if valid (FwValid is not 0x00). The version string is interpreted as ASCII characters. It is a semicolon-separated string, always starting with the Version Number itself, followed by different tags.  Supported Tags:  p Platform (e.g., HillstarVxx) DSP Colibri Suite Version (e.g., ID45r -1167)  s Reserved c Reserved t Build time (e.g., 2013/04/24 14:24:50)  Structure: Vector of 120 bytes interpreted as string (ASCII characters)  Range: (0x00.0xff, 0x00.0xff, 0x00.0xff,)		

#### 4.4 SET RUNTIME PARAMETER

This message is used to set runtime parameters within the GestIC Library. It supports parameters for AFE parameterization, feature configuration and sensor data output. A special value is defined for a persistent saving of parameters to the Flash memory. Parameters which can be made persistent are grouped into three categories:

Analog Front End (AFE) Category

Digital Signal Processing (DSP) Category

System Category

Direction: Host to MGC3X30.

#### **TABLE 4-7: MESSAGE OVERVIEW**

Header				Payload				
Msg. Size	Flags	Seq.	ID	RuntimeParameterID	Reserved	Argument0	Argument1	
1 Byte	1 Byte	1 Byte	1 Byte	2 Bytes	2 Bytes	4 Bytes	4 Bytes	
0x10	n.a.	n.a.	0xA2	see description below				

#### **TABLE 4-8: PAYLOAD ELEMENTS**

Element	Element Size (in bytes)	Description	
RuntimeParameterID	2	ID of runtime parameter. Please refer to Section 4.4.1 "Trigger" through Section 4.4.5.5 "Data Output Lock Mask".  Structure: 16-bit word interpreted as hex value  Range: (0x00000xFFFF)	
Reserved	2	write as '0'	
Argument0	4	Argument values, depending on runtime parameter ID. If not used, Argument0 should be provided as '0'.  Structure: 32-bit word: Argument0  Range: depends on runtime parameter	
Argument1	4	Argument values, depending on runtime parameter ID. If not used, Argument1 should be provided as '0'.  Structure: 32-bit word: Argument1.  Range: depends on runtime parameter.	

#### 4.4.1 Trigger

This parameter forces a trigger defined in Argument 0.

Parameter forces a trigger. RuntimeParameterID 0x1000 Trigger

0x00000000: Force recalibration Argument0

> 0x0000002: Enter Deep Sleep 1: The wake-up sources from Deep Sleep 1 are I2C0 Start bit detection or MCLR Reset. The system will resume from Deep Sleep on any I<sup>2</sup>C messages sent on the bus and the first I<sup>2</sup>C message

will be lost.

0x0000003: Enter Deep Sleep 2: The wake-up source from Deep Sleep 2 is a falling edge on External Interrupt (IRQ0) or MCLR Reset. The IRQ0 (EIO2) should be tied to high when this command is sent unless the MGC3X30 will resume directly after receiving it.

**Range**: (0x00000000, 0x00000002, 0x00000003)

Not used Argument1

#### 4.4.2 Make Persistent

Use this ID to make the parameter set defined in Argument0 persistent (store to Flash memory).

 ${\tt RuntimeParameterID} \qquad {\tt 0xFF00} \quad {\tt MakePersistent} \quad \textbf{Stores parameter in Flash}.$ 

Argument0 0x00000000: Store RTPs for AFE Category

0x00000001: Store RTPs for DSP Category 0x00000002: Store RTPs for System Category

**Range**: (0x00000000, 0x00000001, 00000002)

Argument1 Not used

#### 4.4.3 Analog Front End (AFE) Category

#### 4.4.3.1 SIGNAL MATCHING

Signal matching parameters are used to adjust the Rx signal level at the sampling point.

RuntimeParameterID 0x50 afeRxAtt S Signal matching parameter for

South electrode

0x51 afeRxAtt W Signal matching parameter for

West electrode

0x52 afeRxAtt N Signal matching parameter for

North electrode

0x53 afeRxAtt E Signal matching parameter for

East electrode

0x54 afeRxAtt C Signal matching factor for

Center electrode

Argument0 Contains the value

**Range**: (0x00000000..0x000000FF)

Argument1 Not used

# **GestIC Library Message Reference**

#### 4.4.3.2 ELECTRODE MAPPING

The physical channel number assigned to the electrodes. These parameters represent the physical connection of the electrodes to MGC3X30 Rx channels. For the correct function, the mapping has to be looked up in the circuitry design.

RuntimeParameterID	0x65	Channelmapping_S	Physical channel assigned		
			to the South Electrode		
	0x66	Channelmapping_W	Physical channel assigned		
			to the West Electrode		
	0x67	Channelmapping_N	Physical channel assigned		
			to the North Electrode		
	0x68	Channelmapping_E	Physical channel assigned		
			to the East Electrode		
	0x69	Channelmapping_C	Physical channel assigned		
			to the Center Electrode		
Argument0	Contains the number of physical receive channels (Rx0, Rx1, Rx2, Rx3, Rx4)				
	<b>Range</b> : (0x00000000, 0x00000001, 0x00000002, 0x000000003, 0x00000004)				
Argument1	Not use	ed.			

#### 4.4.4 Digital Signal Processing (DSP) Category

#### 4.4.4.1 TRANSMIT FREQUENCY SELECTION

Sets the amount of used transmitter frequencies and the order in which they are tested for the frequency hopping.

RuntimeParameterID 0x82 TransFreqSelect Parameter to set the used

frequencies IDs

Argument0 Amount of used Tx frequencies. This parameter can be 1, 2, 3,

4 or 5.

Argument1 This determines in what order the transmitter frequencies

are tested. The indexes numbered 0 to 4 represent

respective transmitter frequencies:

Frequency ID 0 corresponds to 115 kHz
Frequency ID 1 corresponds to 103 kHz
Frequency ID 2 corresponds to 88 kHz
Frequency ID 3 corresponds to 67 kHz

Frequency ID 3 corresponds to 67 kHz
 Frequency ID 4 corresponds to 44 kHz

These indexes have to be provided in nibbles.

Example: e.g., Argument0 = 0x04 in combination with

Argument1 = 0x3104 means that frequencies with the index 4, 0, 1 and 3 are used and tested in this specific order.

e.g., Index - Default Frequency Mapping

(Argument 0 = 0x5, Argument 1 = 0x43210)

Frequency ID 0 - Transmitter Frequency: 115 kHz

Frequency ID 1 - Transmitter Frequency: 103 kHz

Frequency ID 2 - Transmitter Frequency: 88 kHz

Frequency ID 3 - Transmitter Frequency: 67 kHz

Frequency ID 4 - Transmitter Frequency: 44 kHz

**Note:** The TransFreqSelect runtime parameter is a write-only parameter and could not be requested with message REQUEST MESSAGE (0x06).

### **GestIC Library Message Reference**

#### 4.4.4.2 TOUCH DETECTION

This parameter enables/disables Touch Detection.

RuntimeParameterID 0x97 dspTouchConfig Parameter to enable/disable

**Touch Detection** 

Argument0 Set Argument0 to '0x08' to enable and set Argument0 to

'0x00' to disable Touch Detection

**Note:** If Argument 1 is not set correctly the system will

show malfunctions.

Argument1 0x08

#### 4.4.4.3 APPROACH DETECTION

This parameter enables/disables Approach Detection mode.

RuntimeParameterID 0x97dspApproachDetectionMode Parameter to enable/

disable Approach
Detection Mode

Argument 0 Set Argument 0 to 0x01 to enable and set Argument 0 to

0x00 to disable Approach Detection

**Note:** If Argument1 is not set correctly the system will

show malfunctions.

Argument1 0x01

Note: On earlier versions than V1.0, the Approach Detection RuntimeParameterID was 0x81 with the same definition of Argument0 and Argument1. This RTC is no longer supported on V1.1 and later. Aurea PC Software still

uses this RTC for legacy purposes.

#### 4.4.5 System Category

#### 4.4.5.1 AIRWHEEL

This parameter enables/disables AirWheel.

RuntimeParameterID 0x90 dspAirWheelConfiq Parameter to enable/disable

AirWheel

Argument0 Set Argument0 to '0x20' to enable and set Argument0 to

'0x00' to disable AirWheel

Note: If Argument1 is not set correctly the system will

show malfunctions.

Argument1 0x20

#### 4.4.5.2 GESTURE PROCESSING (HMM)

This parameter enables the in-built gestures. Disabling one gesture will increase the recognition probability of the others.

If a bit in Argument0 is set to '1', the respective Gesture will be enabled. If a bit in Argument0 is set to '0', the respective Gesture will be disabled.

RuntimeParameterID 0x85 dspGestureMask Parameter to enable/disable

gestures

Argument0 Bit 0: Garbage model

Bit 1: Flick West to East Bit 2: Flick East to West Bit 3: Flick South to North Bit 4: Flick North to South Bit 5: Circle clockwise

Bit 6: Circle counter-clockwise

Argument1 Acts as a mask, set appropriate bits to '1' to change the flag.

All other flags are kept unchanged.

#### 4.4.5.3 CALIBRATION OPERATION MODE

This parameter enables/disables the selected auto-calibration feature.

If a bit in Argument 0 is set to '0', the respective auto-calibration feature will be enabled.

If a bit in Argument 0 is set to '1' the respective auto-calibration feature will be disabled.

RuntimeParameterID 0x80 dspCalOpMode Parameterto enable/disable

auto-calibration

Argument0 Bit 0: Enable/disable start-up calibration

Bit 1: Enable/disable gesture-triggered calibration

Bit 2: Enable/disable negative calibration

Bit 3: Enable/disable idle calibration

Bit 4: Enable/disable invalidity value calibration, if values

are completely out of range

Bit 5: Enable/disable calibration triggered by AFA

Argument1 Acts as a mask, set appropriate bits to '1' to change the flag.

All other flags are kept unchanged.

### **GestIC Library Message Reference**

#### 4.4.5.4 DATA OUTPUT ENABLE MASK

This parameter determines the data output of the message <code>Sensor\_Data\_Output</code> (0x91). If a bit in <code>Argument0</code> is set to '1', the respective payload element will be part of the message <code>Sensor\_Data\_Output</code> (0x91). If a bit in <code>Argument0</code> is set to '0', the payload element will not be part of the message <code>Sensor\_Data\_Output</code> (0x91).

Use  ${\tt DataOutputEnableMask}$  to optimize the sensor data output in terms of  $I^2C$  utilization and efficiency of the host code.

Please mind that enabling all payload elements might lead to malfunctions due to bandwidth limitations on the I<sup>2</sup>C bus.

RuntimeParameterID 0xA0 DataOutputEnableMask Parameter determining the data output.

Argument0 Bit 0: DSP Status

Bit 1: Gesture Data
Bit 2: Touch Data
Bit 3: AirWheel Data
Bit 4: Position Data
Bit 5: Noise Power

Bits 6...10: These bits are reserved and must be set to '0'.

Bit 11: Uncalibrated Signal (CIC) Data. Bit 12: Signal Deviation (SD) Data.

Bits 13...15: These bits are reserved and must be set to '0'.

Argument1 Acts as a mask, set appropriate bits to '1' to change the flag.

All other flags are kept unchanged.

#### 4.4.5.5 DATA OUTPUT LOCK MASK

This parameter determines the data output of the message <code>Sensor\_Data\_Output</code> (0x91). If a bit in <code>Argument0</code> is set to '1', the respective payload element will be part of the message <code>Sensor\_Data\_Output</code> (0x91) no matter whether there is new data or not (payload element is "locked").

If a bit in Argument0 is set to '0', the payload element will only be part of the message  $Sensor_Data_Output$  (0x91) when the data is updated (payload element is variable).

RuntimeParameterID 0xA1 DataOutputLockMask Parameter determining the data output.

Argument0 Bit 0: DSP Status

Argument1

Bit 1: Gesture Data
Bit 2: Touch Data
Bit 3: AirWheel Data
Bit 4: Position Data
Bit 5: Noise Power

Bits 6...10: These bits are reserved and must be set to '0'.

Bit 11: Uncalibrated Signal (CIC) Data. Bit 12: Signal Deviation (SD) Data.

Bit 13...15: These bits are reserved and must be set to '0'. Acts as a mask, set appropriate bits to '1' to change the flag.

All other flags are kept unchanged.

DS40001718D-page 40

#### 4.4.5.6 DATA OUTPUT REQUEST MASK

This parameter determines the data output only of the next message  $Sensor\_Data\_Output$  (0x91). If a bit in Argument0 is set to '1', the respective payload element will be part of the next message  $Sensor\_Data\_Output$  (0x91).

If a bit in Argument 0 is set to '0', the payload element will not be part of the next message Sensor Data Output (0x91) when the data is updated.

This will force the MGC3X30 to send a new message <code>Sensor\_Data\_Output</code> (0x91) even if there were no valid events and data. This message will contain data according to the <code>ArgumentO</code> selection. Then the <code>Sensor\_Data\_Output</code> (0x91) will be sent according to the <code>Data Output</code> Enable and Lock masks only on valid events and data.

RuntimeParameterID 0xA2 DataOutputRequestMask Parameter determining the next data output.

Argument0 Bit 0: DSP Status

Bit 1: Gesture Data
Bit 2: Touch Data
Bit 3: AirWheel Data
Bit 4: Position Data
Bit 5: Noise Power

Bits 6...10: These bits are reserved and must be set to '0'.

Bit 11: Uncalibrated Signal (CIC) Data. Bit 12: Signal Deviation (SD) Data.

Bit 13...15: These bits are reserved and must be set to '0'.

Argument1 Acts as a mask, set appropriate bits to '1' to change the flag.

All other flags are kept unchanged.

#### 4.4.5.7 GESTURE IN PROGRESS FLAG CONTROL

This parameter determines whether the gesture in progress output will be part of the GestureInfo data output of the message  $Sensor_Data_Output$  (0x91). If Argument0 is set to 0x1, the gesture in progress will be output in the GestureInfo field (bit 31) from the message  $Sensor_Data_Output$  (0x91).

If Argument0 is set to 0x0, the gesture in progress will not be output in the GestureInfo field (bit 31) from the message Sensor  $\texttt{Data\_Output}$  (0x91).

For more details please refer to **Section 4.5 "Sensor\_Data\_Output"**.

RuntimeParameterID 0xA3 DataOutputGestureInProgress

Parameter enabling or disabling the gesture in progress

output in the GestureInfo field.

Argument0 0x00000000: **Gesture in progress output disabled** 

0x0000001: Gesture in progress output enabled

Argument1: 0x0000001

**Note:** For the complete list of the <code>Set\_Runtime\_Parameter</code> command

examples please refer to Table A-2.

#### 4.5 SENSOR\_DATA\_OUTPUT

This message contains the sensor data output of the MGC3X30. The content of the message can be configured via bit mask (refer to DataOutputEnableMask and DataOutputLockMask in Section 4.4 "Set\_Runtime\_Parameter").

The elements <code>DataOutputConfigMask</code>, <code>TimeStamp</code> and <code>SystemInfo</code> are always part of the message. The inclusion of further payload elements depends on the configuration and the actual configuration can be read from the payload element <code>DataOutputConfigMask</code>.

Direction: MGC3X30 to Host

#### TABLE 4-9: MESSAGE OVERVIEW

	Hea	der		Payload										
Size	Flags	Seq.	ID	DataOutputConfigMask TimeStamp SystemInfo Variable Depending on DataOutputCon										
1 Byte	1 Byte	1 Byte	1 Byte	2 Bytes	Variable Depending on DataOutputConfigMask									
variable	n.a.	n.a.	0x91	see description below										

#### TABLE 4-10: PAYLOAD ELEMENTS

Element	Element size (in bytes)	Description
DataOutputConfig-Mask	2	Bit mask indicating which data is part of the message.  The following bits are used:  Bit 0: DSPStatus field.  Bit 1: GestureInfo field.  Bit 2: TouchInfo field.  Bit 3: AirWheelInfo field.  Bit 4: xyzPosition field.  Bit 5: NoisePower field.  Bit 6: This bit is reserved.  Bit 7: This bit is reserved.  Bit 810: ElectrodeConfiguration  000: ChCnt = 4, four electrode configuration w/o Center electrode  01: ChCnt = 5, five electrode configuration with Center electrode  Bit 11: CICData field with chCnt entries.  Bit 12: SDData field with chCnt entries.  Bit 1315: These bits are reserved.  Structure: 16-bit word read as a bit mask.  Range: (0x00000xFFFF)
TimeStamp	1	8-Bit Counter of 200 Hz (Sample Interval) 200 Hz counter value wraps around after 256 ticks. This indicates when an event has taken place and allows measuring the elapsed time between two events as long as it is below approximately 1.25 seconds.   Structure: 8-bit word read as decimal value.  Range: (0x000xff)
SystemInfo	1	Bit mask indicating if the respective sensor data is valid. In an application, the sensor data output should only be further processed if the respective bits are set to '1'.  The following bits are used:  Bit 0: PositionValid, if set indicates that the position in the xyzPosition field is valid.  Bit 1: AirWheelValid, if set indicates that the AirWheel is active and the data in the AirWheelInfo field is valid.  Bit 2: RawDataValid, if set indicates that the data of the CICData and SDData fields are valid. Otherwise those fields must be ignored.  Bit 3: NoisePowerValid, if set indicates that the NoisePower field is valid.  Bit 4: EnvironmentalNoise, if set indicates that environmental noise has been detected.  Bit 5: Clipping, if set indicates that the ADCs are clipping.  Bit 6: This bit is reserved.  Bit 7: DSPRunning, if set indicates that the system is currently running. If not set, the system is about to go to sleep.  Structure: 8-bit word read as a bit mask.  Range: (0x000xFF)  Note: Position Data is disabled from the sensor data output and AirWheel is enabled: Position Valid will be set and sent with SystemInfo and a new message will be sent when AirWheel detection starts.

## **GestIC Library Message Reference**

#### TABLE 4-10: PAYLOAD ELEMENTS (CONTINUED)

Element	Element size (in bytes)	Description
DSPStatus	2	This element consists of two bytes. The first byte contains information about calibration events. The second byte indicates the Tx frequency currently used.  Bit 0: This bit is reserved.  Bit 1: CalibrationInfo: Forced calibration (by Host)  Bit 2: CalibrationInfo: Start-up calibration  Bit 3: CalibrationInfo: Gesture triggered  Bit 4: CalibrationInfo: Negative value  Bit 5: CalibrationInfo: Idle calibration  Bit 6: CalibrationInfo: Invalid value calibration  Bit 7: CalibrationInfo: calibration triggered by AFA  Bits 815: Tx Frequency in kHz gesture as decimal value (44115)  Structure: 2 bytes, first byte read as a bit mask second byte as decimal.  Range: (0x000xFF; 44115)
GestureInfo	4	This field contains the 32-bit gesture information word.  **Recognized Gestures**:  The recognized gestures are results of the HMM classification. Edge detection can be used to further classify where the gesture has been done (Edge Flicks). Furthermore, gesture attributes give information about the direction of the flick. The gesture information is given as a bit field and can be decoded as follows:  Bits 07: Recognized gesture as decimal number  0: No gesture  1: Garbage model  2: Flick West to East  3: Flick East to West  4: Flick South to North  5: Flick North to South  6: Circle clockwise (only active if AirWheel disabled)  7: Circle counter-clockwise (only active if AirWheel disabled)  Bits 811: These bits must not be interpreted.  Bits 1215: Gesture Class read as a decimal number  0: Garbage model  1: Flick gesture  2: Circular gesture  2: Circular gesture  Bit 16: Edge flick — is 1 if flick gesture is classified as edge flick  Bits 1730: These bits are reserved.  Bit 31: Gesture recognition in progress. This bit is set when the Gesture Recognizer is active and reset when the gesture is recognized and the Recognizer is off.  0: Gesture recognition not in progress  1: Gesture recognition in progress  Structure: 32-bit word read as a bit mask  **Range**: (0x000000000xFFFFFFFFFF)
TouchInfo	4	Contains touch information The following bits are used to indicate a touch event on the respective electrodes:  Bit 0: Touch South electrode Bit 1: Touch West electrode Bit 2: Touch North electrode Bit 3: Touch East electrode Bit 4: Touch Center electrode Bit 5: Tap South electrode Bit 6: Tap West electrode Bit 7: Tap North electrode Bit 8: Tap East electrode Bit 9: Tap Center electrode Bit 10: Double Tap South electrode Bit 11: Double Tap South electrode Bit 12: Double Tap North electrode Bit 15: Tip South electrode Bit 11: Double Tap North electrode Bit 12: Double Tap North electrode Bit 13: Double Tap East electrode Bit 14: Double Tap Center electrode Bit 15: This bit is reserved. Bit 15: This bit is reserved. Bit 1623: Touch Counter: 8-bit counter. This counter determines the period between the time when the hand starts moving to touch until it is detected. This period is equal to [Touch Counter Value] x 5 (ms). The counter starts counting when the minimum approach speed required to detect a touch event is exceeded until the touch is detected. After each touch detection, the counter is reset.  Structure: 32-bit word read as a bit mask Range: (0x00000000x0x0xFFFFFFFFF)
AirWheelInfo	2	The first byte contains a counter which indicates how far the AirWheel rotation has progressed. Incrementing values indicate a clockwise rotation. Decrementing values indicate counter clockwise rotation. An increment of 32 approximates one full rotation. AirWheelInfo is only valid if the AirWheelValid bit in the element SystemInfo is '1'.  The second byte is reserved.  Structure: Vector of two 8-bit words read as a decimal value  Range: (0x00000x00FF)

#### TABLE 4-10: PAYLOAD ELEMENTS (CONTINUED)

Element	Element size (in bytes)	Description
xyzPosition	6	This element contains x, y and z position data. Two bytes are used for each of the positions x, y and z. Bytes 1 and 2: x position Bytes 3 and 4: y position Bytes 5 and 6: z position Bytes 5 and 6: z position The position information is only valid if the PositionValid bit in the element SystemInfo is '1'. The data give the position of the user's hand in the Cartesian coordinate system. Position data of [0,0,0] represent the origin of the coordinate system and data of [65535, 65535] are the maximum dimension of the sensing space. The origin is defined as the lower left corner of the sensitive space (South-West) at the surface of the system.  Structure: Vector of three16-bit words read as a decimal value for each position x, y, z  Range: (0x0000.0xFFFF) for each position x, y, z
NoisePower	4	Noise Power of the GestlC® system.  NoisePower is only valid if the NoisePowerValid bit in the element SystemInfo is '1'.  Structure: 32-bit word read as a float value  Range: (03.402823e+38)
CICData	4xChCnt	Uncalibrated Sensor Data (CIC Data)  Element size depends on ChCnt indicated in payload element DataOutputConfigMask bits 810.  CICData are only valid if the RawDataValid bit in the element SystemInfo is '1'.  Structure: Vector of four, respectively five, 32-bit words interpreted as float values in format xxxx.xxxx.xxxx.xxxx.xxxx (South.West.North.East.Center)  Range: (-3.402823e+383.402823e+38) for each channel
SDData	4xChCnt	Signal Deviation (SD)  Element size depends on ChCnt indicated in payload element DataOutputConfigMask bits 810.  SDData are only valid if the RawDataValid bit in the element SystemInfo is '1'.  Structure: Vector of four, respectively five, 32-bit words interpreted as float values in format XXXX.XXXX.XXXX.XXXX.XXXX.XXXX.XXXX.XX
Reserved	_	Reserved: Additional payload elements can be added in the future or for debug purposes.

**Note:** For the examples list of the Sensor\_Data\_Output command please refer to Table A-3.

## MGC3030/3130 GestIC® LIBRARY INTERFACE DESCRIPTION

## Chapter 5. Messages for GestIC Library Update

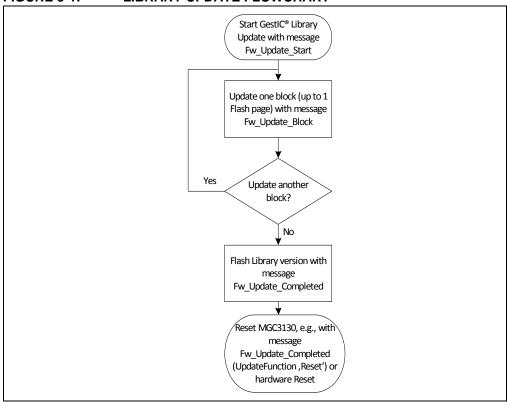

#### 5.1 LIBRARY LOADER UPDATE PROCEDURE

The general library update process is shown in Figure 5-1. Please note that only libraries provided by Microchip Technology can be updated on the MGC3X30. Furthermore, an Application Note which describes the library update process in detail can be delivered by Microchip by request only.

For the library update process, three different messages are required:

- Fw\_Update\_Start (Message ID 0x80)
- Fw Update Block (Message ID 0x81)
- Fw Update Completed (Message ID 0x82)

#### FIGURE 5-1: LIBRARY UPDATE FLOWCHART

#### 5.2 FW\_UPDATE\_START

This message starts the update session of the MGC3X30 device.

Direction: Host to MGC3X30

#### TABLE 5-1: MESSAGE OVERVIEW

	Head	der		Payload									
Msg. Size	Flags	Seq.	ID	Crc	SessionID	IV	UpdateFunction	Reserved					
1 Byte	1 Byte	1 Byte	1 Byte	4 Bytes	4 Bytes	14 Bytes	1 Byte	1 Byte					
0x1C	n.a.	n.a.	0x80	see description below									

#### TABLE 5-2: PAYLOAD ELEMENTS

Field	Size (in bytes)	Description
Crc	4	A CRC32 (Ethernet, polynomial: 0x04C11DB7) calculated across the rest of the message (20 bytes)  Structure: 32-bit word  Range: (0x000000000xfffffffff)
SessionId	4	The SessionID is a random number generated by the Host. It has to be resent in the $Fw\_Update\_Completed$ message or else the session will be invalid. $0x00000000$ is an invalid SessionID and is used to force the device in a wait loop. In this case, the remaining information in this message is discarded. Structure: 32-bit word Range: $(0x000000000xfffffffff)$
IV	14	14-byte value which is used to encrypt the data.  Structure: Vector of 14 bytes  Range: (0x000xFF, 0x000xFF, 0x000xFF,)
UpdateFunction	1	<ul> <li>The UpdateFunction sets the mode of the whole update session:</li> <li>If the Session mode is set ProgramFlash, the Payloads of the following Fw_Update_Block messages are written to Flash.</li> <li>If the Session mode is set VerifyOnly, the code is only verified (comparison between Flash content and decrypted payload of Fw_Update_Block messages), but not written to Flash. If a mismatch between decrypted payload and Flash is found, a System_Status message with an Error 8 (ContentMismatch) is returned</li> <li>Note: The following Fw_Update_Block messages also contain an</li> </ul>
		UpdateFunction field. That field defines the mode for the single Update Blocks.  However:  - if the mode of the session is set to ProgramFlash via Fw_Update_Start, the UpdateFunction of the single Fw_Update_Blocks can be set to ProgramFlash or to VerifyOnly.  - if the mode of the session is set to VerifyOnly via Fw_Update_Start, the UpdateFunction of the single Fw_Update_Blocks can only be set to VerifyOnly.  Structure: Single byte containing dedicated values (see list below)  Possible values:  0 Program Flash 1 VerifyOnly
Reserved	1	Reserved

## **Messages for GestIC Library Update**

#### 5.3 FW\_UPDATE\_BLOCK

This message updates one block of the Flash. The size of one block can be up to 128 bytes.

Direction: Host to MGC3X30

#### TABLE 5-3: MESSAGE OVERVIEW

	Heade	r		Payload										
Msg. Size	Flags	Seq.	ID	Crc	Address	Length	UpdateFunction	Payload						
1 Byte	1 Byte	1 Byte	1 Byte	4 Bytes	2 Bytes	1Byte	1 Byte	128 Bytes						
0x8C	n.a.	n.a.	0x81	see description below										

TABLE 5-4: PAYLOAD ELEMENTS

Field	Size (in bytes)	Description
Crc	4	CRC32 (Ethernet, polynomial: 0x04C11DB7) value, calculated across the rest of the message (132 bytes)  Structure: 32-bit word  Range: (0x000000000xffffffff)
Address	2	The Flash address of the block which will be programmed/verified. If the block is smaller than 128 bytes, it has to be aligned at the end of each page. So, if the next update block is a full 128-byte block, it can be Flash-page aligned again.
		Note: The lower 4 KB are reserved for the Library Loader and cannot be updated. If a value lower than the 4 KB is used, a System_Status message with the Error 5 (InvalidAddress) is returned.
		Structure: 16-bit word Range: (0x10000x7fff)
Length	1	The length of the content of the block which will be updated: <b>Structure</b> : Single byte <b>Range</b> : (0x000x80)
UpdateFunction	1	The UpdateFunction sets the mode for this single Update Block.  - If the mode is set ProgramFlash, the decrypted Payload is written to Flash.  - If the Session mode is set VerifyOnly, the code is only verified (comparison between Flash content and decrypted payload, but not written to Flash. If a mismatch between decrypted payload and Flash is found, a System_Status message with Error 8 (ContentMismatch) is returned.
		Note: If the mode of the whole session was set to  VerifyOnly in the Fw_Update_Start message, only VerifyOnly can be set in the Fw_Update Block; otherwise, a System_Status message with Error 6 (InvalidFunction) is returned.
		<b>Structure</b> : Single byte containing dedicated values (see list below)
		<pre>Possible values: 0    ProgramFlash 1    VerifyOnly</pre>
Payload	128	The Payload contains the encrypted content of the block which will be updated.
		Note: Its length is always 128. If the length of the content is smaller than 128, it will be filled with zeros. The Crc is then calculated over the entire 128-byte Payload.
		Structure: Vector of 120 bytes interpreted as String (ASCII characters)  Range: (0x000xff, 0x000xff, 0x000xff,)

## **Messages for GestIC Library Update**

#### 5.4 FW\_UPDATE\_COMPLETED

This message finalizes the update session of the MGC3X30.

Direction: Host to MGC3X30

#### TABLE 5-5: MESSAGE OVERVIEW

	Head	ler			Payload										
Msg. Size	Flags	Flags Seq. ID			SessionID	UpdateFunction	FwVersion	Reserved							
1 Byte	1 Byte	1 Byte	1 Byte	4 Bytes	4 Bytes	1 Byte	1 Byte 120 Bytes								
0x88	n.a.	n.a.	0x82	see description below											

#### TABLE 5-6: PAYLOAD ELEMENTS

Field	Size (in bytes)	Description									
Crc	4	CRC32 (Ethernet, polynomial: 0x04C11DB7) value, calculated across the rest of the message (128 bytes)  Structure: 32-bit word  Range: (0x000000000xfffffffff)									
SessionID	4	The SessionID is the same random number as used for the Fw_Update_Start. 0x00000000 is an invalid SessionID and forces the device into a restart. In this case, the remaining information in this message is discarded.  Structure: 32-bit word  Range: (0x000000000xfffffffff)									
UpdateFunction	1	The UpdateFunction defines how the update session is finalized.  If the session was started as ProgramFlash session, it has to be finalized with the ProgramFlash session. If not, the library version is not stored and the library is not valid. If ProgramFlash is used in a VerifyOnly session, a System_Status message with Error 6 (InvalidFunction) is returned.  If Restart is used, the device will restart. FwVersion and SessionID are included in Crc calculation, but content is ignored.  Structure: Single byte containing dedicated values (see list below)  Possible values:  O ProgramFlash Program Flash  Restart									
FwVersion	120	It contains the library version. Only libraries with IDs other than 0 are valid.  Structure: Vector of 120 bytes interpreted as String (ASCII characters)  Range: (0x000xFF, 0x000xFF, 0x000xFF,)

## MGC3030/3130 GestIC® LIBRARY INTERFACE DESCRIPTION

## Appendix B. Glossary

#### TABLE B-1: GLOSSARY

Term	Definition
AFE	Analog front end
Application Host	PC or embedded controller which controls the MGC3X30
Aurea	MGC3X30 PC control software with graphical user interface
Colibri Suite	Embedded DSP suite within the GestIC® Library
Deep Sleep	MGC3X30 Power-Saving mode
E-field	Electrical field
Frame Electrodes	Rectangular set of four electrodes for E-field sensing
GestIC <sup>®</sup> Technology	Microchip's patented technology providing 3D free-space gesture recognition utilizing the principles of electrical near-field sensing
GestIC <sup>®</sup> Library	Includes the implementation of MGC3X30 features and is delivered as a binary file preprogrammed on the MGC3X30
Gesture Recognition	Microchip's stochastic HMM classifier to automatically detect and classify hand movement patterns
Gesture Set	A set of provided hand movement patterns
Hand Brick	Copper coated test block (40x40x70 mm)
Hillstar	MGC3130 Development Kit
HMM	Hidden Markov Model
MGC3130	Single-Zone 3D Gesture Sensing Controller
Position Tracking	GestIC <sup>®</sup> technology feature
Sabrewing	MGC3X30 evaluation board
Self Wake-up	MGC3X30 Power-Saving mode
Sensing Area	Area enclosed by the four frame electrodes
Sensing Space	Space above sensing area
Signal Deviation	Term for the delta of the sensor signal on approach of the hand versus non-approach
Spacer Brick	Spacer between the sensor layer and hand brick (Styrofoam block 40x40xh mm) with h= 1/2/3/5/8/12 cm
SPU	Signal Processing Unit
Approach Detection	GestIC <sup>®</sup> technology feature: Power-Saving mode of the MGC3X30 with approach detection
Woodstar – MGC3030 Development Kit	MGC3030 – 3D Gesture Controller
